## A NOTE ON DATA SOURCES

The data in this report on underwater homes and home prices is based on Zillow's Negative Equity Report for the end of 2013 (Gudell 2014). Zillow only reports data for ZIP codes for which it has a representative sample of homes, so its data set covers roughly 22,000 ZIP codes nationally. There are approximately 30,000 total ZIP codes in the country, excluding P.O. Box ZIP codes. The Zillow data can be accessed through this website: <http://www.zillow.com/research/2013-q4-negative-equity-6371>.

The default and foreclosure data in this report was prepared by Americans for Financial Reform and is based on proprietary data from RealtyTrac's 2013 Foreclosure Market Trend Report. It includes the total number of unique properties that received a notice of default, lis pendens, notice of trustee sale, or a notice of foreclosure sale in 2013, or that became a real-estate owned property following foreclosure. These are all different types of foreclosure filings. Because ZIP code boundaries are not always fully aligned with city limits, the statistics for the number of homes in default or foreclosure at the city level should be treated as estimates rather than precise figures.

The demographic data is from the Census Bureau's 2012 American Community Survey Five-Year Demographic and Housing Estimates. Because of the way that the Census Bureau defines race and ethnicity, individuals who are both African American and Latino may have been counted twice.

# UNDERWATER AMERICA

This report examines national trends that are leaving many families behind and identifies the most troubled geographic “**hot spots**”—metro areas, cities, and neighborhoods in all regions of the country—where a significant portion of families are “**underwater.**”
